

Transocean 714 upgrade

In December 2009, Global Energy Services began the shipyard phase for the 5 Year SPS and accommodation module upgrade to Transocean's 714 Drilling unit.

Turnkey Project Delivery

With over 210 activities, the Global Energy Group demonstrated its wide-ranging capabilities - reducing risk and saving client costs through a turnkey service.

Accommodation Modules

Our scope included the design and build of 3 bespoke accommodation modules and the refurbishment of 49 cabins. By manufacturing in our UAE facilities, we were able to offer a quality product and deliver major cost savings for our client.

Specialist Access

By pioneering an innovative encapsulation technique, our specialist access teams were able to prepare and coat the columns without the requirement for costly scaffolding. As well as reducing costs, the procedure mitigated the environmental impact usually associated with coating scopes.

Project Scale

A peak workforce of 260, (190,000 man-hours) executed the 12 week programme, remobilising the rig for drilling in the UKCS.
