

Case study: Thule Power

Rigfit were contracted by QGM to carry out new build works on the rig Thule Power, a jack-up drilling unit capable of operating in water depths of up to 250ft and drilling depths up to 30,000ft.

On this contract Rigfit specified supplied/manufactured and fitted all materials required to carry out the scope of works including all insulation, floor screeds, floor coverings, wall cladding, ceilings, lighting, electrical cable supplies, new galley equipment, new mess hall furniture, wet units, doors, windows and custom made furniture for cabins and offices.

All procurement for this contract was done from our Dubai office, and all works were carried out while the rig was in for a rebuild at the Dubai quay side.
